

What's New

Craig recently returned from the Dominican Republic where he spent the week with a group of doctors and nurses running mobile medical clinics. Throughout the week they saw over 700 people in 4 different communities. Many of the residents had never been to see a doctor. While the need was great, the team was able to diagnose and treat everyone that wanted to be seen. Another team will be visiting the same communities in October and will follow up with many of the patients the doctors flagged as needing continued care.

Ask him to show you some pictures the next time you see him!

To enhance our customers quality of life and the health of their business.

What Compliance Standards Should You Maintain? Understanding HIPAA, NIST And CMMC

Compliance standards are some of the most important things a business needs to maintain to be well-respected while staying out of legal trouble. Failure to meet these standards can make your business susceptible to fines and legal action. You'll also take a hit on your reputation as customers, vendors and competitors may find your business to be untrustworthy. By enforcing compliance, you're working to promote ethical behavior while protecting the rights of your employees, customers and other stakeholders.

Unfortunately, it's not always obvious which compliance standards apply to your industry or specific business. While most businesses need to ensure they're following Occupational Safety and Health Administration standards for workplace safety, they must also meet Environmental Protection Agency regulations for protecting the environment. There are also compliance requirements that have to do with the information you store and share. Here are three compliance standards that you should know about as a business owner or leader:

Health Insurance Portability And Accountability Act (HIPAA) You probably already know about HIPAA if you've been to any doctor appointment in the past two decades. This law was enacted in 1996 to protect the privacy of individuals' personal health information and to ensure the security of that information. HIPAA only applies to "covered entities," which include health care providers, health plans and health care clearinghouses. These entities must comply with the rules set forth by HIPAA when handling protected health information. They must have the necessary administrative, technical and physical safeguards in place to ensure the confidentiality, integrity and availability of the information.

There's been confusion in the past relating to HIPAA, especially during the Covid-19 pandemic. When employers requested vaccination status from their employees, many claimed that this violated HIPAA, which is false. HIPAA only applies to covered entities. It's essential that you know the ins and outs of HIPAA if you work in the health care industry. Noncompliance can lead to fines, legal trouble and, in some cases, the loss of your license to practice medicine.

National Institute Of Standards And Technology (NIST)

The NIST is a nonregulatory agency of the United States Department of Commerce that develops and promotes standards, guidelines and best practices for ensuring the security and privacy of information systems. NIST compliance is vital for any organization that handles sensitive information, such as personal data, financial information or intellectual property. It becomes even more important for heavily regulated industries like health care, finance and government. NIST compliance can help organizations protect against cyberthreats, data breaches and other security incidents. It also helps organizations meet regulatory requirements set by HIPAA.

When you adhere to NIST standards, you'll easily identify vulnerabilities, improve incident response plans and prioritize security measures. The NIST has created a helpful framework and various publications that provide guidelines for various systems and scenarios. If you're looking for a specific publication or are interested in other NIST resources, head to their website, NIST.gov, for more information.

Cybersecurity Maturity Model Certification (CMMC)

The CMMC is a framework developed by the U.S. Department of Defense to assess and certify the cyber security practices of organizations that work with the DoD. This framework includes a set of controls and processes that organizations must implement to protect sensitive information and systems from cyberthreats. The CMMC framework applies to all organizations

"By enforcing compliance, you're working to promote ethical behavior while protecting the rights of your employees, customers and other stakeholders."

that work with the DoD and handle Controlled Unclassified Information. This often includes defense contractors, suppliers, subcontractors and organizations that provide services to the DoD, such as IT, logistics and engineering. Businesses that support the defense supply chain, including manufacturers, technology firms and professional service providers, also need to adhere to CMMC guidelines. Failure to achieve CMMC certification can result in being unable to bid on or win DoD contracts.

Compliance is something every business needs to be aware of, regardless of industry. Start by investigating HIPAA, NIST, and CMMC to see if their rules and regulations are applicable to your business, then look to other organizations. Doing so will help set your business up for success.

How Well Are You Safeguarding Your Company's Data And Your Customers' Private Information?

The answer for too many business is 'not as well as we could be'. If that's true for your business, you are leaving yourself and your company open to massive liability, *millions* in fines, lost business, lawsuits and so much more.

Why? Because you are a hacker's #1 target. They know you have access to financials, employee records, company data and not to mention customer information – social security numbers, credit card numbers, birth

Why Not Take 4 Seconds Now To Protect Yourself, Protect Your Company And Protect Your Customers?

Our 100% FREE and 100% confidential, exclusive CEO Dark Web Scan is your first line of defense. To receive your report in just 24 hours, visit the link below and provide us with your name and company e-mail address. Hopefully it will be ALL CLEAR and you can breathe easy. If your company, your profits and your customers are AT RISK, we'll simply dig a little deeper to make sure you're protected.

Don't let this happen to you, your employees and your customers. Reserve your exclusive CEO Dark Web Scan now!

Get your free Dark Web Scan TODAY at www.ccmgtech.com/dark-web-scan

Why Aren't My Employees Reading My E-Mails?

Have you ever talked with an employee about a communication you sent and they tripped their way through the conversation? Employees don't always read communications from upper management, and you're left trying to figure out why. You could blame it on employees just not wanting to read, but there's often a deeper issue involved. Here are a few reasons why your employees may be ignoring your emails.

- Improper Timing: Your employees are less likely to read your e-mails if you send them out at the end of the day.
- Information Overload: Emails with too much information cause your employees to take too much time from their other tasks. Only put the information that's absolutely necessary in your e-mails.
- Unclear Expectations: Are your employees required to read your e-mails? They might just ignore the emails if they don't think they pertain to their job or provide relevant information.

Impress Any CEO In 3 Easy Steps

You have a meeting scheduled with a CEO. Your goal is to convince them to either spend \$1 million on your product or service, hire you or invest in your idea. What's your strategy?

Many people "show up and throw up" and push a lot of information at the CEO, either verbally or by PowerPoint. A CEO will not hire you simply because you show that you know what you're talking about. Another flawed approach is to phrase your request as a "we ought to." CEOs don't decide to do things just because other people say they should do something. Worse yet is when people only talk about why they want something to happen, ignoring the CEO's wishes, concerns and perspective. So, how do you successfully convince a CEO?

- 1. Seek first to understand the CEO's perspective. That is Stephen Covey's advice. It needs no further explanation. Your first step in discussing a topic with a CEO is to put all your energy into asking probing questions, listening and learning what the CEO thinks about a topic and why. Forget about your agenda or your needs for a moment.
- 2. Reflect the CEO's perspective to their satisfaction. This step is tricky. Most people cannot objectively reflect or restate another person's perspective about a topic without putting their own slant on it. I first learned this step during my psychology Ph.D. training during a class on conflict resolution. At this step, you must restate the CEO's perspective on

the topic, simply and without putting words in their mouth or trying to spin it in your favor. You know you have succeeded once the CEO says the magic word, "exactly." This means that the CEO believes you understand their perspective. Then, and only then, have you earned permission to move to the final step.

3. Propose your idea as a way to help the CEO achieve their goals. The mindset for this step is not that you are about to trick or fool a CEO into doing something that's not good for them. Your mindset is that you are about to convince a CEO to do something that *is* good for them. (And by the way, if what you are about to propose is not in the CEO's best interests, then don't propose it!) A simple way to present your idea is to say, "Your goals are X, your concerns are Y, so I propose Z."

Contrary to popular belief, great ideas don't sell themselves. It takes a skillful leader to successfully convince a CEO, and now you have the tools to do so.
